
Lasercut 5.3 Software Free ^NEW^ Downloadl

Without installation, You can use within a few minutes, 1. It is a perfect record device for cutting. How to cool the cooling pipe do not play a role in the effectiveness of.

Q: Como pegar o valor de uma DataGridView em tempo de execução? Tenho um DataGridView que é exibido na tela de execução do projeto e a data inicial de inscrição. Quando o usuário começa a digitar no dgv os dados de inscrição, ele vai sendo registrado no banco de dados, mas o valor inicial é atual mas no banco de dados. Esse é o código: `try { BD.conecta(); DataTable dt = BD.getListaTabelaInscritos(); dt = BD.InserirDatTable(dt); dataGridView1.DataSource = dt; } catch (Exception ex) { Console.WriteLine(ex.Message); }` Isso funciona tudo bem, mas eu queria que o dgv possa ser alterado depois de registrado no banco de dados. Como que o valor inicial ficasse escondido, já que no momento da data inicial que ele é executado, não está no banco de dados. A: Isso aqui... `private void btnInserir_Click(object sender, EventArgs e) { try { BD.conecta(); DataTable dt = BD.getListaTabelaInscritos(); dt = BD.InserirDatTable(dt); dataGridView1.DataSource = dt; dataGridView1.Refresh(); BD.ConclusaoBD(); } catch (Exception ex)`
