I have a viewmodel where I need to use a setting value to determine the model to use. I have the following code in the viewmodel: public bool TestBool { get { return m_TestBool; } set { if (m_TestBool!= value) { m_TestBool = value; RaisePropertyChanged("TestBool"); } } } I also have a parent viewmodel that has a method that looks like this: public void ChangeToModel() { m_Model.Id = 1; m_Model.TestBool = false; m_Model.Name = "This is a test"; } The problem I'm facing is when I set the
