What's New In?

The Citricle Ping is a free program for Windows that plays an alert sound if the connection to the Internet stops or starts up. It is a quiet and unobtrusive tool. Reviews Hello, my name is Elena. I am the author of this blog and I'd like to share with you all my experience and knowledge about writing software, programming and about IT in general. So here you can find the latest news and my opinion on: programming, IT news and lots of other stuff. I am open to any contributions and suggestions. Feel free to leave a message or to follow me. Have fun! :) Meta Category: Erlang Erlang is a functional programming language originally developed by Bertram Felgenhauer and Erich Valdermann at Ericsson. It is based on the algebraic data type and functional programming ideas, which results in code that is usually easier to understand than code written in the object-oriented languages such as C++.

Erlang was primarily developed for use in telecommunication systems and software reliability. Today, Erlang is used mainly for high performance and highly reliable computing in the internet, telecommunications, finance, computer security, hardware and avionics. Erlang is a very interesting language, but it is not easy for beginners. This article will show you how to start programming in Erlang with a simple and easy to understand tutorial. Let's start with the terminal. Open the command prompt and type the following command: \$ erl If the command succeeds, then we have successfully started a new Erlang instance. You should see the Erlang shell prompt: If you are not already a developer, it is very easy to start developing in Erlang. Let's go to the tutorial below: Hello Erlang, we are going to learn how to write a simple Erlang program called Citricle. Here is a list of the functions that we will use in our Citricle program. As we can see above, the to_integer function converts the argument into a number. In Erlang, we will use binary (not decimal) notation for integer numbers. Let's see how to use the integer number conversion function: 4 > to_integer(3.14159265). 4 The Erlang shell returns the result as a list (collection of elements). to_integer(3.14159265). [3.14159265] Here, we use another function called :0.123 to convert a decimal number into a binary number. You can see that the result of the conversion has the same number of zeroes and ones. 123 :0.123. [1, 0, 0, 1, 1, 0, 1] Let

System Requirements For Citricle Ping:

- PC: OS: Windows 7/8/8.1/10 (64bit) Processor: Intel i5-2400 3.1GHz or equivalent, AMD equivalent Processor Graphics: Nvidia Geforce G210 or equivalent, AMD equivalent Hard Disk: 1GB RAM (6GB recommended) Video: DirectX 11 compatible GPU Memory: 8GB available space for installation DirectX: 11 compatible Graphics Card Sound Card: DirectX compatible Sound Card DirectX: 11 compatible Hard Drive: 1GB available space for installation DirectX: 11 compatible PC: OS: Windows 7/8/8
