Since we often scan in graphic elements from a print advertising, it's sometimes difficult to judge print results. In the past, our page proofers would review the spot in the print environment, even if the final result was being viewed on a screen. With the addition of an HD screen, we knew we could save a lot of time and effort with that final review. We hit a snag, though. If the spot was highlighted using Photoshop, the next time we scanned the spot it was darkened, although it would show up brightened in the PDF proof. It was hard to see the spot's details as we tried to determine what change was being made that would have been invisible to the human eye. Unfortunately, because the spot was repeated without changes, it had become an issue. Many advertisers use a different highlight color for each version of the spot. The reason was we were viewing the spot with the wrong color. The resolution of this issue was to create a separate, "spot" object on a newly viewed page. The spot itself could then be switched, and changes made to the spot would have no effect on the printed version. That would mean that only the spot's main object would be printed. Color was important, so Duplicate would be used to make a spot object from the spot's main element. Again, the spot object would be highlighted with its own color. A simple way to see the highlighting aspect of an object would be to duplicate that object. While a duplicate will keep all the original style information of the original, it will usually have an object group associated with it. You can then enable the visibility of the object group so that you can see the highlight color in the graphics tablet.

In addition to the powerful new features added to Adobe Photoshop, the software is also getting a new layout designed by renowned for its usability and visual appeal—Joshua Davis. The design team decided to ditch the familiar and ubiquitous toolbars of previous versions. They replaced them with an menus-and-tabs system that blends all tools into a single cohesive ‘spaceship’ interface. This is accessible and provides a comfortable viewing experience, as you work on your graphics with minimal clicks and clicks. The new layout also features a new, dynamic Document Viewer, a handy interface for browsing the detailed settings of your graphics. Photoshop also has a number of new creative tools powered by Adobe Sensei. It gives you a set of innovative photography tools such as a motion creator that lets you take photos with any direction of motion, and one called Face-Tracker, which tracks the front-facing aspect of a face in a photo. Other new tools include Face-in-Faces, which lets you create composites with a compilation of faces with the help of Adobe Sensei’s AI technology (it’s pretty cool how your friends at Adobe think you look in this photo). **Adobe Photoshop** - One of the most powerful and versatile tools is introduced in the latest version of Adobe Photoshop, which is called Camera Raw. With a simple click of the button, you can easily enhance and retouch a photo. You can also add a new artistic touch to your selfies by applying effects such as High Dynamic Range and Exposure, Lens and Lightroom profile emulation, fancy high-key lighting, and more. These are all things that you used to have to manually trigger in older versions of Photoshop, but with the new Camera Raw update, you no longer have to.
